BIA Case Differentiation Criteria

Classification 02: Implant Retained Restorations (Not Full Arch)
Mark the points below as per your case requirements

Points calculation methodology: Make a selection for each row as per the prevailing situation as described in the columns A, B and C. Total the number of selections made in each Column in the row labelled 'Points' in the respective column A, B or C. Multiply the total number of selections by the multiplier, ie, 1X for column A, 2X for column B and 3X for column C. Add the total points after applying the multiplier and enter in to box labelled 'Total Points'. This will determine the classification of the case and dictate the ideal requirements to process the case.
